SUMMARY

Software Engineer, Leader, and Educator with experience building and scaling production systems used by millions of users. Masters backend and full-stack development in C++, Python, JavaScript, and AWS, with a focus on microservices, APIs, and CI/CD pipelines. Owns products end-to-end, from backend architecture, cloud infrastructure, and API design to front-end interfaces. Additional experience in 3D game development includes character modeling, rigging, and gameplay systems.

SKILLS

Programming Languages: C++, C#, Lua, Python, Golang, Rust, JavaScript, React, React Native, SQL, AWS, BigQuery, Git

Software: Visual Studio Code, Visual Studio, Jupyter Notebook, Cursor, Jenkins, Postman, Roblox Studio

Soft Skills: Agile Methodology, Team Collaboration, Conflict Resolution

EDUCATION

Master of Advanced Study in Engineering: Power & Autonomous Systems — University of California, Berkeley — *Fall 2027*

Bachelor of Science in Computer Science, GPA 3.5 — University of Maryland Global Campus — *August 2024*

AWARDS & CERTIFICATIONS

- MAS-E Berkeley Departmental Scholarship Recipient (2025)
- JPMC Tech for Social Good, Build-a-thon first Place Winner (2022)
- Chainalysis Cryptocurrency Fundamentals Certification (2022)
- Entrepreneurship Fellow, Bowie State University (2021)
- Microsoft C# Foundations Certification (2023)
- Center for Financial Achievement Scholar (2022)
- 1517 Fund Grant Winner (2022)
- NCWIT Aspirations in Computing Award (2018/2019)

WORK EXPERIENCE

Roblox Jumpstart Fellow

Roblox

June 2026 – Present

- Co-founded and led technical development of Starcove, a Y2K-inspired cozy social MMO on Roblox, taking it from initial concept to a working MVP, architecting interconnected gameplay systems (farming, housing/décor, fashion contests, bakery economy) in Lua while building the studio's engineering pipeline, sprint process, and early brand partnerships
- Selected for the Roblox Jumpstart 2026 accelerator, one of 60 teams chosen from a pool of over 2,000 applicants, earning mentorship, ad credits, and co-marketing support
- Designed and implemented a custom development pipeline (Cursor → Rojo → Roblox Studio → GitHub), enabling live-sync workflows and version-controlled collaboration across the team
- Modeled, rigged, and animated 3D characters using Meshy AI and Lua, importing and integrating them into gameplay while applying motion design and game camera principles to deliver polished, responsive character movement
- Organized and led sprint planning, writing and prioritizing user stories to keep development on schedule with a two-person engineering team
- Built core backend systems in Lua, including data persistence, currency/progression services, and a seven-tier ranking system, applying key game design principles to support long-term retention and monetization

Associate Software Engineer

CoStar Group

September 2024 – June 2026

- Developed robust backend solutions in C# within a microservices architecture hosted on AWS infrastructure (Lambda, ECS, DynamoDB, S3) to improve application performance, reliability, and scalability of Homes.com, serving millions of users
- Utilized existing NuGet packages to successfully create date/timezone conversion across all Homes.com listing show times
- Made major contribution to automated test and deployment pipelines, pushing unit and integration test coverage above 90%
- Reduced tech debt user stories by 25% by efficiently completing user stories by their due dates

Co-Founding Engineer and Growth Specialist**Design for Users***January 2025 – Present*

- Co-founded a digital agency delivering custom SaaS applications to small businesses, designing and delivering websites, and providing social media strategy to content creators
- Developed and launched 5+ websites using modern front-end frameworks such as JavaScript, TypeScript, and React Native, including applications like Hedge Wallet, which integrated the MoonPay API and leveraged blockchain technology and the Jito API for backend functionality
- Strategized and managed social media growth for multiple creators, executing marketing campaigns that increased audience reach by 50–100%

Research Fellow**Massachusetts Institute of Technology***June 2024 – August 2024*

- Completed an intensive 12-week program on the use of AI for business solutions, including a capstone project applying AI to solve complex business challenges and drive data-informed decision-making
- Used Python and Jupyter Notebook to deliver a real estate thesis highlighting cost disparities and trends within market cycles
- Maintained a 90% average across testing subjects

Software Engineering Intern**Wellington Management***June 2023 – August 2023*

- Used Python to design a user-friendly front-end for visualizing financial variables, and developed a Python algorithm to extract, compile, and summarize internal data from a financial database
- Developed an algorithm to create a heat map on a financial dashboard, displaying account health with financial trends
- Held leadership responsibility as scrum master, organizing teams and planning meetings with clients and stakeholders
- Received a \$15,000 scholarship based on successful completion of the program

Software Engineering Intern**Cvent***January 2022 – March 2022*

- Participated in regression testing, performance and data analysis, resulting in improvements to hospitality cloud scripts
- Held leadership position as scrum master, helping the intern team deliver user stories on time
- Successfully lead code reviews analysis, preventing catastrophic failures and enabling cloud infrastructure optimization

LEADERSHIP & PROFESSIONAL DEVELOPMENT

Career Preparation Fellow**Management Leadership for Tomorrow (MLT)**

- Was accepted in and participated in an competitive 18-month structured curriculum involving business case studies, professional skill-building workshops, and leadership development training chosen from for top bipoc collegiate talent
- Completed business and technical assignments to strengthen strategic thinking, communication, and leadership capabilities

College Loop President**Girls Who Code (GWC)**

- Elected to lead GWC College Loop, coordinating initiatives with universities and organizations to increase representation in tech
- Planned and facilitated events, hackathons, and skill-building sessions, promoting a strong peer network

STEM Education & Tutoring Leadership

- Led STEM instruction and founded a tutoring practice serving students from kindergarten through graduate level across robotics, coding, biology, math, science, English, history, Spanish, and financial engineering
- Achieved a perfect teaching score across impact, lesson quality, and collaboration metrics as a Lead Teacher with AmeriCorps
- Built and launched a new community outreach partnership with the Flathead Reservation, managing the relationship end to end and designing interactive STEM kits that raised students' grade level competencies
